

IND-PV-GUIDE-005 — Executive Narrative & Insight Standards

Document ID: IND-PV-GUIDE-005 **Version:** 1.2 **Effective date:** 01-Jan-2025 **Last review:** 25-Jun-2026 **Owner:** Business Insights Office **Audience:** AI Copilot designers, Analysts, CXO briefing authors **Companion SOPs:** 001 (metrics), 002 (COVID), 003 (EV), 004 (regions)

1. Purpose

Raise narrative quality from “chart caption” to **decision-grade commentary** that executives trust. This guide is the behavioural contract for AI-generated narration when OKF knowledge is available.

2. Insight classes (use the highest that data supports)

Class — Definition — Example

|---|---|---|

- L1 Descriptive — What happened — “Maruti leads units in 2024.”
- L2 Comparative — Vs peer / prior — “Tata units grew faster than Maruti YoY.”
- L3 Contextual — Links to SOP market knowledge — “2020 dip is COVID lockdown, not brand failure (SOP-002).”
- L4 Prescriptive — Recommended action — “Reallocate demo inventory to South EV hubs where EV share > national.”

AI answers should aim for **L2 minimum**, **L3 when OKF retrieves a relevant SOP**, **L4 only when thresholds in SOP-004 are met**.

3. Structure of a best-in-class narrative

- **Headline** — one line, metric + winner + period.
- **Story** — 2–4 sentences: magnitude, leader, context.
- **Findings** — max 3 bullets.
- **Recommendation** — one next drill or action.
- **Knowledge citation** — when SOP text influenced the story: `(IND-PV-SOP-00X)`.

3.1 Currency & volume formatting (India)

- Revenue: ■ with Lakh / Crore scaling for large numbers.
- Volume: integers with thousand separators + “units”.
- Never show £ or \$ for this India PV domain.

3.2 Forbidden narrative patterns

- “Breakdown of revenue” without naming the leader.
- Decimal quarters (`2024-Q1.333`).
- Units Sold = 0 while orders exist (metric mapping bug).
- Blaming an OEM for 2020 industry trough.
- Calling Hybrid an EV without saying electrified.

4. Domain storylines that resonate with leaders

Use these arcs when data supports them:

- **COVID scar & recovery** — 2019 baseline → 2020 trough → 2023+ strength (SOP-002).

- **EV adoption curve** — share rising into mid-teens; ICE still majority (SOP-003).
- **OEM oligopoly of volume** — Maruti, Tata, Mahindra concentration (SOP-001 / 004).
- **SUVisation** — SUV share of body style mix.
- **Festive H2 uplift** — Sep–Dec seasonality.

5. Hybrid answer pattern (data + knowledge)

When both SQL results and OKF snippets exist:

```
`` [Data finding] [SOP context sentence] [Recommended next question] Source:
IND-PV-SOP-00X ``
```

Example:

> Tata leads EV units in the latest period. Per IND-PV-SOP-003, EV share should be reported on units (not orders), and Petrol remains the volume backbone nationally. Next: compare EV share by South vs West metros.

6. Role-based emphasis

Persona — Emphasise — De-emphasise

|---|---|---|

CXO — YoY, recovery, EV share, concentration risk — Colour SKUs, individual order IDs

Regional Head — Zone/city units, salesperson productivity — National OEM philosophy

FP&A; — Revenue, ASP, AOV, certified formulas — Subjective brand stories

Product — Powertrain, model, car_type mix — Corp ID lists

7. Quality checklist before publish / show in chat

- ☐ Metric matches SOP-001
- ☐ Time label is Q1-YYYY / YYYY-MM compliant
- ☐ COVID disclaimer if 2020-centric
- ☐ EV formula stated if share discussed
- ☐ No raw surrogate keys
- ☐ Citation present if OKF used
- ☐ One clear next step

8. Success definition

A “best class” answer is one an executive can paste into a leadership email **without rewriting definitions**, and an analyst can reproduce exactly from certified SQL.
